

GROUP 6
Finalised Major Project
(Artificial Intelligence and Data Science)

PROJECT TITLE:

Smart AI Platform for Multilingual Legal Document Classification, Summarization and Retrieval.

PROBLEM STATEMENT:

India's legal system faces a significant backlog of over 5 crore pending cases. A major contributor is the manual effort required to process complex, voluminous legal documents in multiple languages. Currently, no scalable AI platform exists that can classify and summarize legal documents in a multilingual Indian context. There is an urgent need for a domain-specific, AI-enabled legal document intelligence platform that can automate classification, summarization, and facilitate efficient information retrieval from legal documents.
